COMPANY INTRODUCTION

- SEBANG GLOBAL BATTERY OVERVIEW
- SEBANG GLOBAL BATTERY BRANCHES

Battery For Better Life

Sebang Global Battery is a specialized manufacturer of automotive and industrial batteries that exports products to more than 130 countries worldwide. Since its establishment in 1952, Sebang Global Battery has achieved stable growth through management innovation and technological development, and currently holds approximately 43% of the domestic lead-acid battery market share, making it the top player. Sebang Global Battery has a variety of product lines that suit different usage environments and continues to invest in research and development to lead the battery market. Its high-quality products have passed international standards (KS, ISO/TS16949), and it boasts the largest domestic production capacity through expanding production lines at factories and establishing new ones.

SEBANG

SEBANG GLOBAL BATTERY

In addition, Sebang Global Battery supplies products to global automotive companies, and actively invests in independent technology research and development since expanding its R&D center in 2016. Its subsidiary, Sebang Lithium Battery, also has the world's highest level of product portfolio by producing auxiliary power devices for vehicles, battery modules and packs for electric vehicle drives using lithium batteries. Sebang Global Battery secures the competitiveness of future growth businesses based on new technologies and strict quality management. In the future, Sebang Global Battery aims to expand its business scope and become a global battery company by leveraging its accumulated technological capabilities and sales networks established in major regions worldwide to expand not only in the existing product market but also in the next-generation battery market.

PRODUCTION CAPACITY

OPERATION RATE

GWANGJU_19M / yr

CHANGWON_6M / yr

GWANGJU PLANT

- Production Capacity : 19Mpcs / yr
- Highly Automated Production Line
- Flooded Battery & EFB (Auto/Commercial/Marine & RV/Lawn & Garden)

CHANGWON PLANT

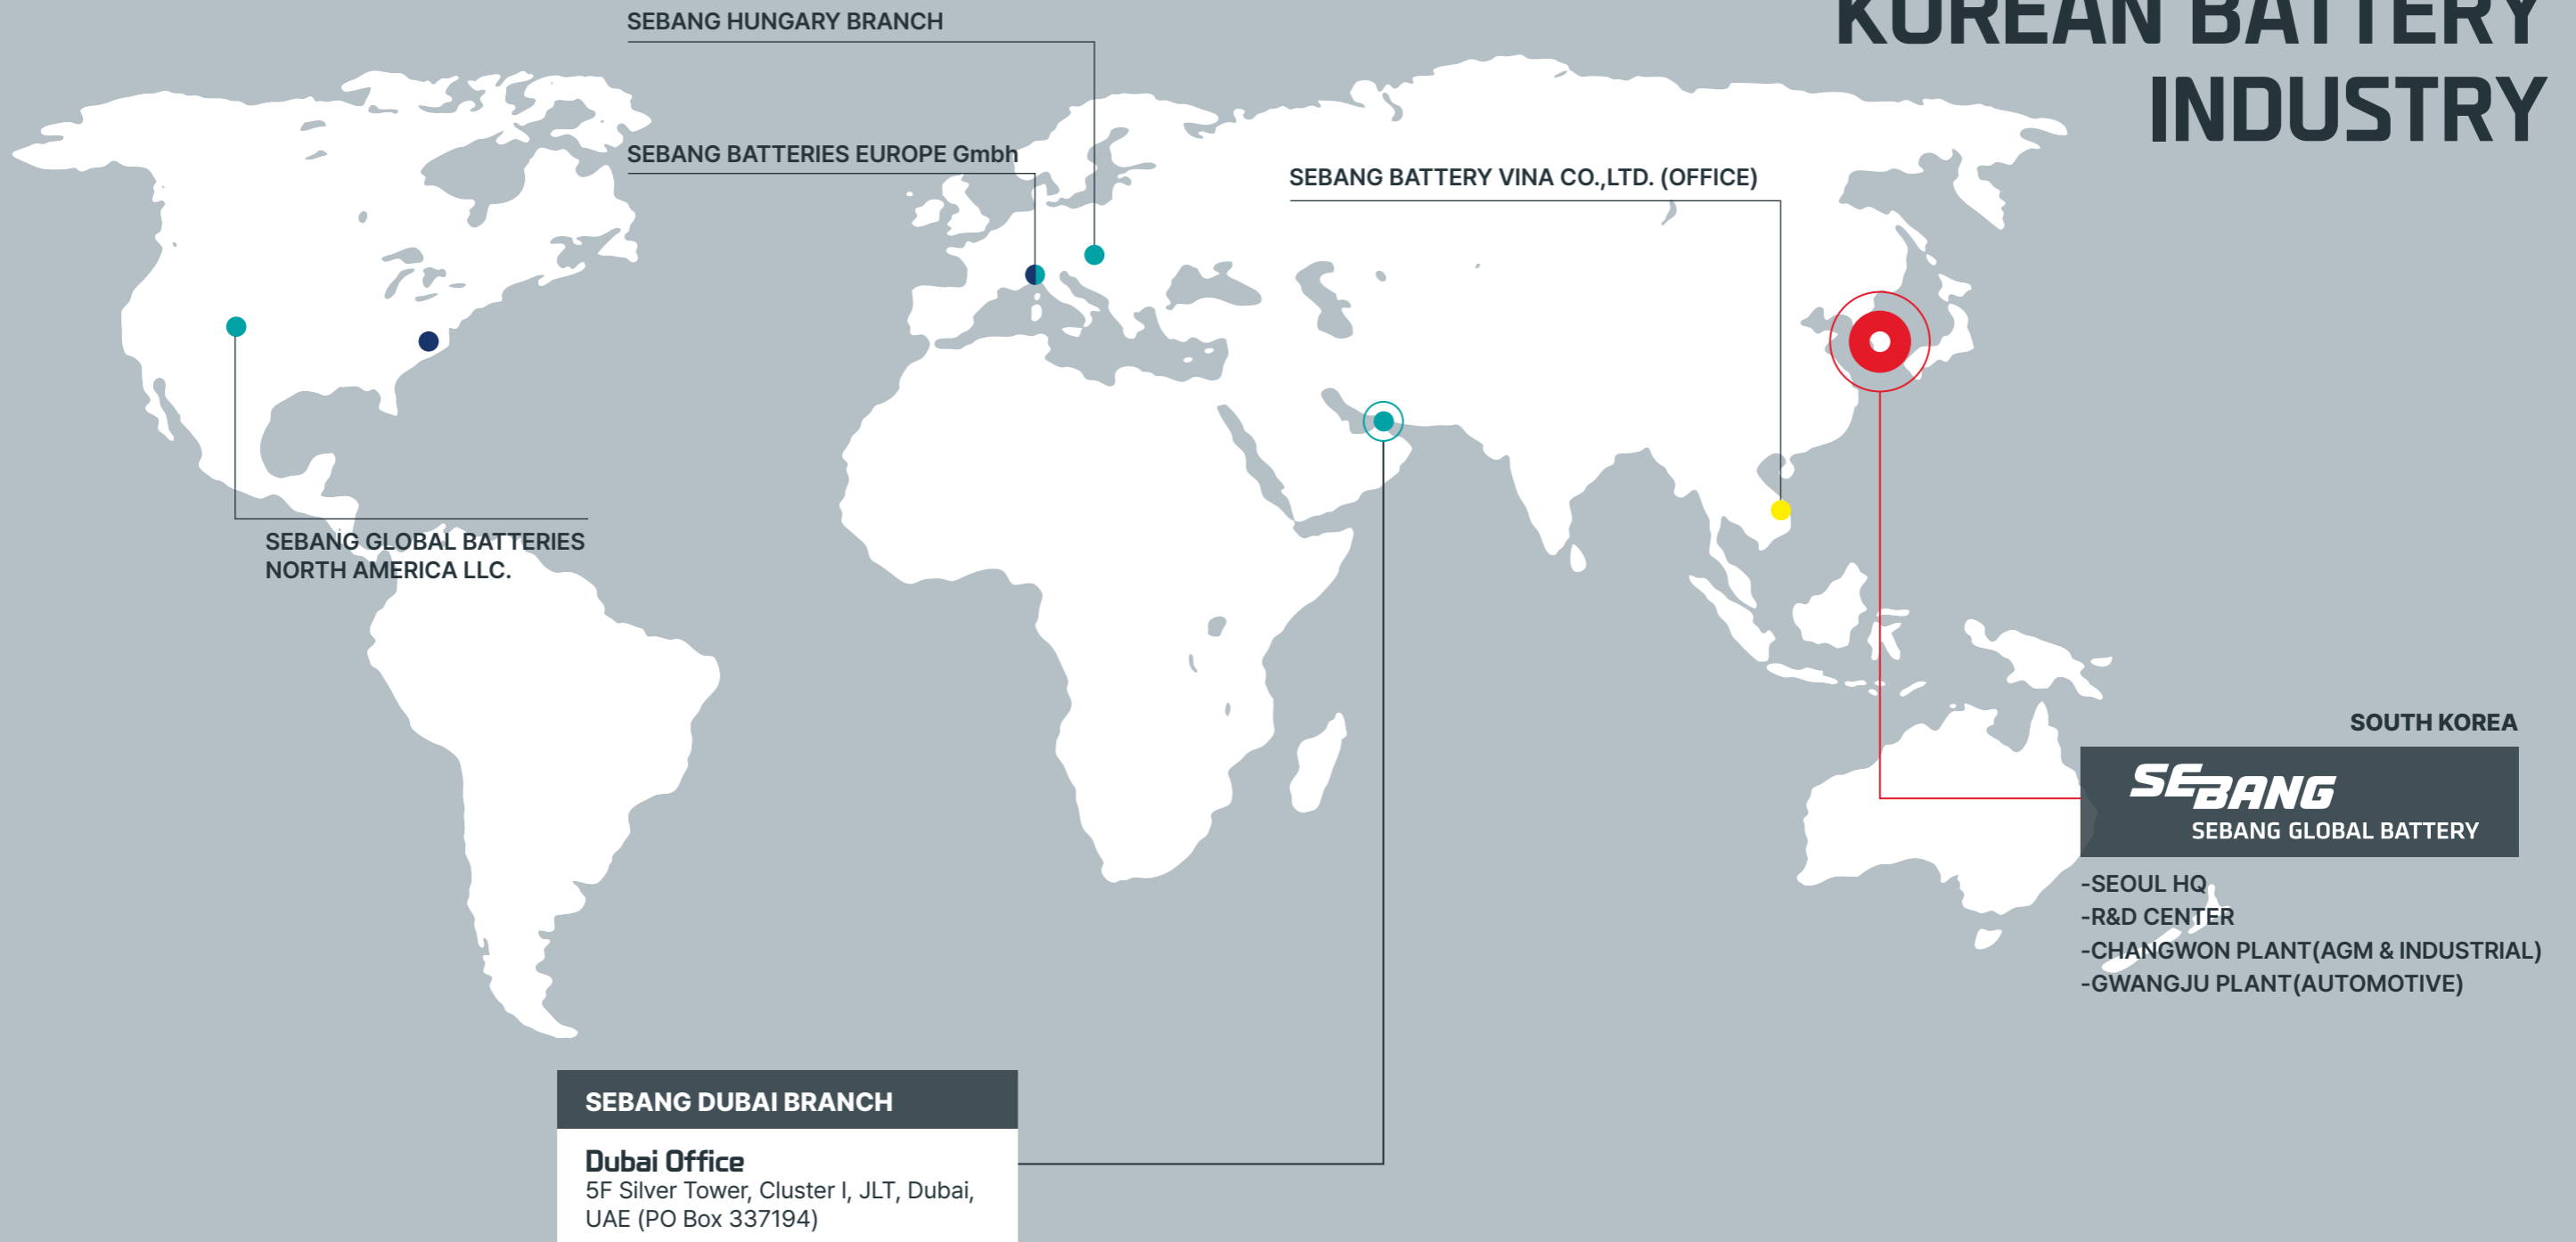

- Production Capacity : 6 Mpcs / yr
- AGM Technology
- Only Manufacturer for Industrial Battery in Korea (Back-up Power Solution, Telecommunications, Golf Cart, Folk Lift, etc.)

SEBANG GLOBAL BATTERY HISTORY

- 1952.09** Starting the first step as the Naval Institute of Technology
- 1966.02** The first battery company in Korea
- 1978.09** Beginning and development of Sebang Global Battery
- 1987.11** Becoming an enterprise
- 1997.10** Growing company
- 2006.03** Golf Car Battery LONGEST launched
- 2010.09** Premium AGM Battery launched
- 2015.06** Opened Europe Overseas Office in Germany
- 2021.08** Opened North America Office in Denver, CO

SEBANG GLOBAL BATTERY BRANCHES

“ REPRESENTING KOREAN BATTERY INDUSTRY

- HQ and Main Plants : South Korea (Automotive, Industrial)
- Overseas Branches : USA, Germany, Hungary, U.A.E
- Warehouses : USA, Germany

”

TECHNOLOGIES

- SMF
- AGM & EFB
- PREMIUM BATTERY

SMF

CONVENTIONAL

Battery that protects cars from extreme environments.

As our flagship product, it has been selected as the best battery by consumers for a long time and has been steadily upgrading to meet consumers' expectations for performance.

Improved starting performance with a special calcium alloy grid and high purity refined water that prevents lifespan degradation at high temperatures and ensures strong starting performance even in extreme environments.

Minimized self-discharge and maximized recovery performance with new materials: special tissue and special alloy. (HTC)

With a fully sealed structure and a labyrinth water recovery system, we have achieved a completely maintenance-free (MF) design that eliminates any electrolyte leakage and requires no maintenance.

COMPARISON

SMF / EFB / AGM

	SMF (STANDARD)	EFB (ENHANCED FLOODED BATTERY)	AGM (ABSORBENT GLASS MAT)
VEHICLE SYSTEM	-	ENGINE START/STOP	· ENGINE START/STOP · REGENERATIVE BRAKING SYSTEM · ENHANCED POWER CONTROL SYSTEM
VEHICLE APP.	STANDARD TYPE	SMALL -MID SIZE START/STOP	PREMIUM & DIESEL TYPE START/STOP
FUEL EFFICIENCY	-	ABOUT 2~5% ↑	ABOUT 5~10% ↑
TYPE	FLOODED		ABSORBENT GLASS MAT
FUNCTION	SLI	· MULTIPLE REPETITIVE START · LIMITED(SHORT TERM) ENGINE STOP	· MULTIPLE REPETITIVE START · LONG TERM ENGINE STOP
CCA	100% (STD)	150%(VS STD)	165%(VS STD)
LIFE CYCLE	100% (STD)	200%(VS STD)	300%(VS STD)

As a leading battery technology company

Sebang Global Battery is committed to continuous research and development, focusing on performance enhancement and product development of premium batteries such as the AGM series and EFB series for vehicles that provide charging-importance, durability, and longevity, which are used in Start-Stop vehicles

1 Indicator

Indicator shows the charging and discharging status of the battery. "Green" means charged, "Black" means discharged (requires re-charging), and "White" means replacement needed.

INDICATOR ● OK ● CHARGE ● REPLACE

2 Double lid with labyrinth structure

- Prevent electrolyte losses by collection and returning liquid to the reservoir.
- Vents allow the battery to "breathe" during temperature changes and charging.

3 Flame Arrester

- Safety system
- Prevent the explosion from spark of outside
- Minimize the acid-leakage
- Prevent the inflow of dust

4 Lead-Calcium Grids

- Offer considerable strength
- Resistant to grid corrosion
- Over-charge resistant
- Minimal gassing and water usage
- Less self-discharge
- Resist thermal runaway

Grid Technology

Expanded Grid

Punched Grid

Creating sub grain boundary which provide longer life span against corrosion.

- Good for endurance life span
- High corrosion resistant
- High conductivity

Ergonomic easy carry down fold handle

Cold forging terminal

High strength from fine structure and prevent the leakage

5 Centered Cast-on Plate Straps

- Stronger than the thinner gas-burned conventional connectors.
- Reduce the lever action movement resulting from road shock.

6 Low-Resistance Envelope Separators

- Encapsulate negative plates
- Prevent "treeing" and internal shorting between positive and negative plates.

Hot-melting

Hot melt or Bonding

- Strong vibration durability and long life in the automobile
- Improve resistance of tough road condition

Special additives

High density active material with special additives

- Improve charge acceptance
- Good for retention from deep discharge state

NST Special Tissue for positive pastes

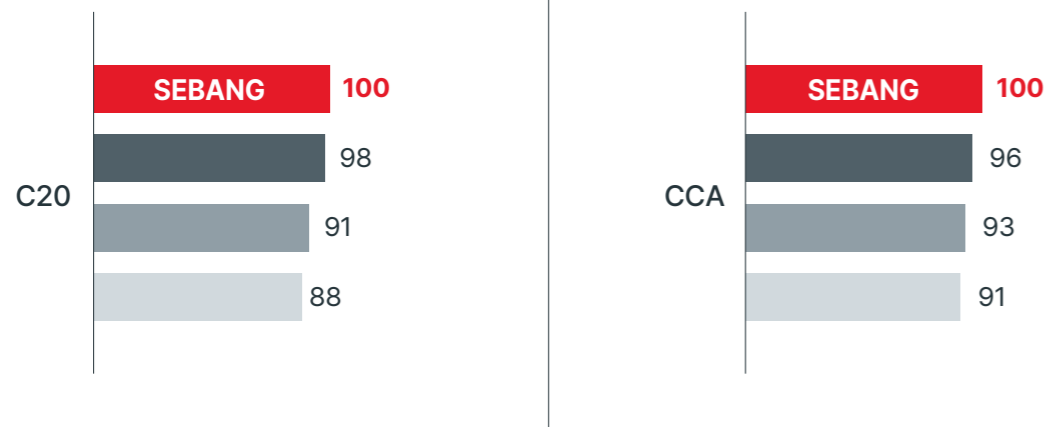

Prevent the active material shedding from frequent charging and discharging.

- Offer good adhesion of active mass on the plate
- Strong resistance of Acid
- Improve of endurance life cycle

SEBANG GLOBAL BATTERY'S half-century of accumulated experience and unique technology is contained within its products

MEDIUM-SIZED BATTERY COMPARISON

Index | ● SEBANG ● A ● B ● C

COMMERCIAL (HEAVY DUTY) BATTERY for trucks and buses is a battery with technology accumulated over half a century

HEAVY DUTY BATTERY COMPARISON

Index | ● SEBANG ● A ● B ● C

SEBANG GLOBAL BATTERY is the NO.1 battery brand in South Korea and recognized worldwide

AGM & EFB

START & STOP

The **AGM battery** is a next-generation vehicle battery developed for vehicles equipped with SMART power generation control systems. In traditional vehicles, the battery was only used briefly for providing starting current for the engine and 12V power for accessories like radio, lights, AC compressors, and the charging was done by sending a continuous current to maintain a fully charged state while driving, which lowered energy efficiency and fuel economy. However, most modern vehicles now have SMART power generation control systems installed to improve fuel efficiency. Since charging is intermittent, tailored to the battery's remaining capacity, fuel efficiency has been improved, but battery usage has increased. Therefore, equipping vehicles with AGM products optimized to manage various functions and sustain more cycles compared to conventional batteries is helpful in increasing economy. AGM batteries have a longer product life and improved safety by its non-spillable nature and the use of dedicated lead plates and absorbent glass mat.

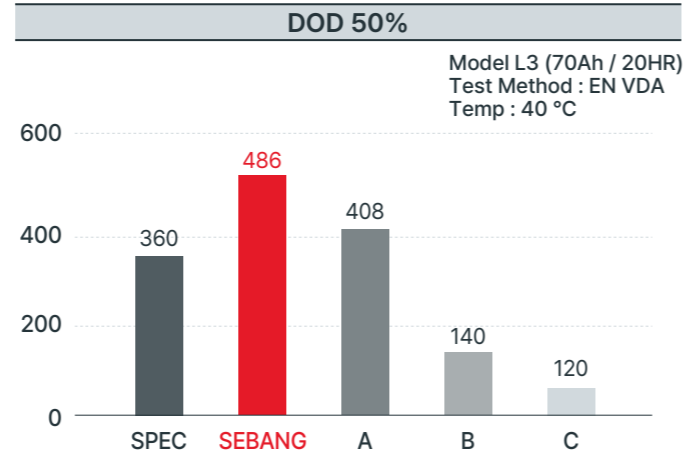

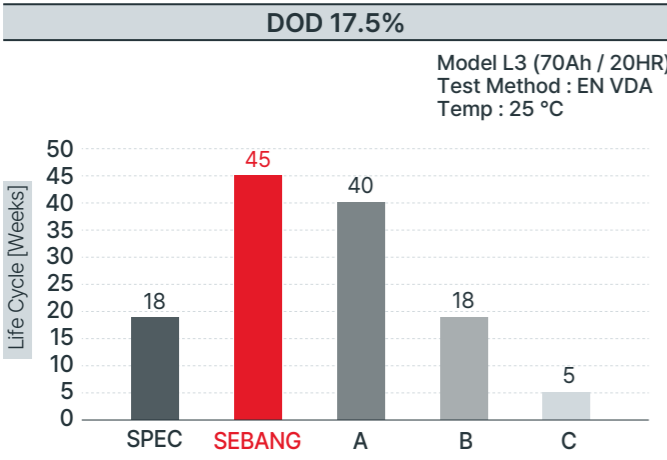

EFB battery is suitable for small and midsize vehicles with start-stop systems and no regenerative braking system. They have a longer lifespan than standard batteries and provide effects such as reduced gas emissions and improved vehicle convenience features, similar to AGM batteries.

AGM (Absorbent Glass Mat)

	AUTO STOP	Improved stratification of electric poles, substrates, active materials, and electrolytes optimized for AUTO STOP system application
	ELECTROLYTE ABSORPTION	Application of PUNCH substrate to prevent leakage by absorbing electrolyte, high-density hygroscopic GLASS MAT separator, glass fiber mat
	REUNION	Recombination of gases occurring inside the battery
	VALVE REGULATED	Application of VALVE REGULATED using one-way valve
	IMPROVE FUEL EFFICIENCY	Car manufacturers are adapting new technologies like Start & Stop and Regenerative Braking System, which requires significant energies from battery. Sebang Global AGM batteries are suitable for these applications and let you save fuel 5~10%.
	CO2 REDUCTION	Reducing the CO2 emission is key task of car industry. Coping with climate change and resource depletion, we all care for Earth, Green Globe. Sebang Global AGM battery is supporting human kind's efforts with the most advanced technologies which are reliable for this purpose.
	OE QUALITY + CHARGING RELIABILITY	Sebang Global Battery produces AGM batteries at a dedicated production line where we produce the original equipment and after-market batteries which guarantee the best quality with OE requirements. Sebang Global Battery meets the highest environmental standards at every stage of the manufacturing process. Sebang Global Battery ensures that you get the OE quality standard product.
	ECO FRIENDLY	If you can't plant a tree in your garden, plant Sebang Global AGM battery in your car. It creates energy and saves CO2 as tree does.

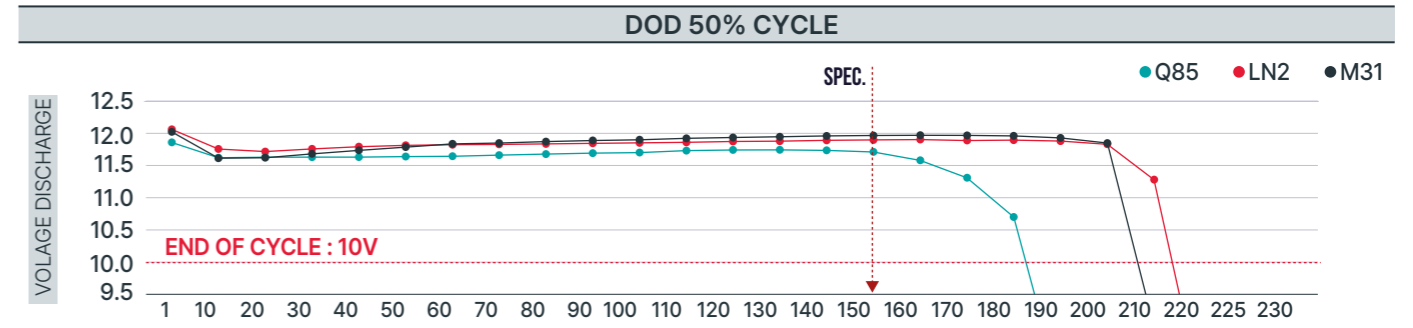

AGM

- VALVE CAP**
 - Control internal pressure
 - Hydrogen recombination
- POSITIVE PLATE**
 - High Density Active Material
 - Fine & Uniform 4BS
- NEGATIVE PLATE**
 - High Charge acceptance
 - Low water consumption
- CASE**
 - Reinforced design is precisely tailored to support battery elements.
 - Material is exceptionally strong, durable and withstands the shock and vibration from road
- CAST-ON-STRAP**
 - Stronger than the thinner gas-burned conventional connectors.
 - Reduce the lever action movement resulting from road shock
- ABSORBED GLASS MAT SEPARATOR**
 - Low Resistance & High Density
 - High Ionic Conductivity

EFB

- SPECIAL DOUBLE LID**
 - Anti-leakage structure
 - Proof against 50° tilt
- GRID TECHNOLOGY**
 - Creating sub grain boundary which provide longer life span against corrosion.
 - Good for endurance life span
 - High corrosion resistant
 - High conductivity
- Expanded Grid** (Image)
- Punched Grid** (Image)
- HIGH PURE ELECTROLYTE**
 - Low water loss
- ELECTROLYTE DDITIVES**
 - Increase deep discharge cycle performance
- MIXING ELEMENT**
 - Prevent stratification (Option for European/DIN Types)
- SPECIAL ADDITIVES**
 - Improved charging acceptance
- SPECIAL ORGANIC FIBER**
 - High Life Cycle

LIFE CYCLE	DOD 50 %	150 cycle	183 cycle	150 Cycle	214 Cycle	150 Cycle	209 Cycle

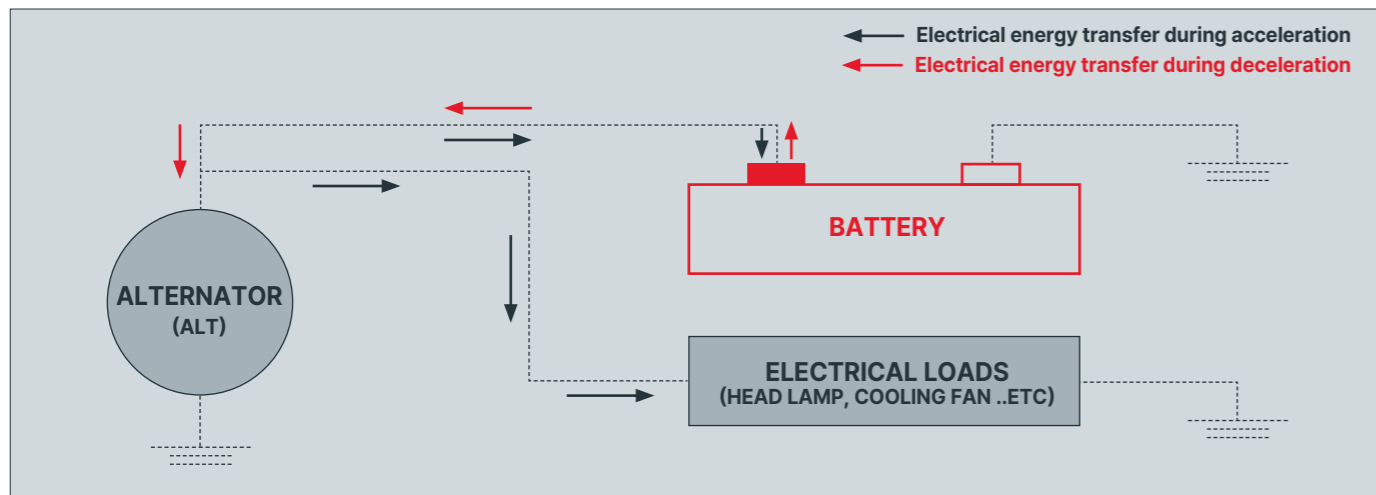

WHAT IS AMS? (ALTERNATOR MANAGEMENT SYSTEM)

Controls the alternator voltage variably depending on the vehicle operating conditions to improve vehicle fuel efficiency.

The alternator management system detects vehicle operating conditions, electrical loads, and battery charging status to control the alternator's voltage through the Engine Control Module (ECM), thereby improving fuel efficiency and maintaining optimal battery charging status. It performs charging control, discharging control, and normal control depending on the battery's charging status and driving conditions. During acceleration, it performs discharging control to consume battery power and reduce the alternator's voltage to reduce its workload, while during deceleration, it performs charging control to increase the alternator's voltage and replenish the consumed battery voltage.

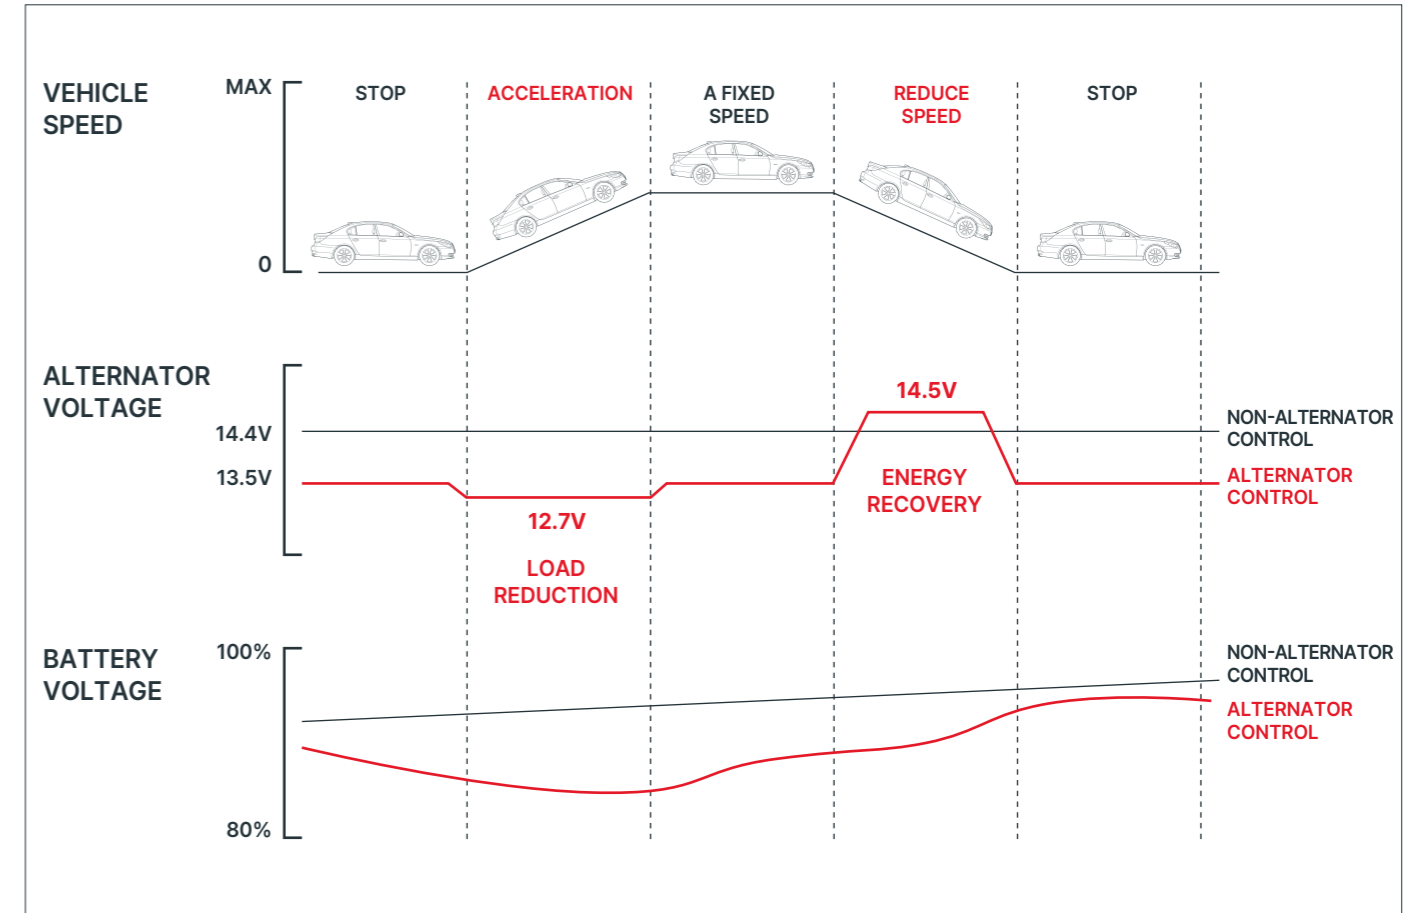

AGM BATTERY SERIES

MAJOR COMPONENTS

- ALTERNATOR (ALT)** Produces electrical energy and supplies power to the battery and electrical loads
- BATTERY** Supplies power to start the vehicle and supports the alternator during operation
- ELECTRICAL LOADS** Devices that consume electrical energy, such as ignition systems, lighting systems, and control units

HOW DOES THE ALTERNATOR MANAGEMENT SYSTEM WORK?

BASIC PRINCIPLE

The movement of electrical energy by potential difference. (from high potential to low potential)

NON-ALTERNATOR CONTROL VEHICLE

Continues to charge with a fixed voltage of 14.4V regardless of vehicle operating conditions. (-35mA/°C is applied when the temperature rises)

ALTERNATOR CONTROL VEHICLE

During vehicle acceleration, to reduce the engine's load, the alternator's voltage is lowered to 12.7V, Battery's OCV becomes 12.8-12.9V, which causes a potential difference, discharging the battery.

*Discharging occurs only when the battery voltage is above 12.7V, and charging occurs when it is below 12.7V

VEHICLE DECELERATION

During vehicle deceleration, the alternator's voltage is increased to 14.5V to create a potential difference, charging the battery. (energy recovery)

BATTERY PRINCIPLES AND FEATURES

SELF-DISCHARGE RATE BY TEMPERATURE

-The higher the temperature, the more battery self-discharged.
 [Self discharge : summer season (April to September) > winter season (October to March)]
 * This data is a test number. It uses as a reference value and it can be changed depending on region and season.

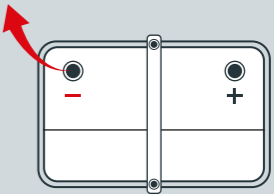

CHANGES IN THE REQUIRED ENGINE STARTING LOAD AND AVAILABLE CAPACITY OF THE BATTERY BY TEMPERATURE

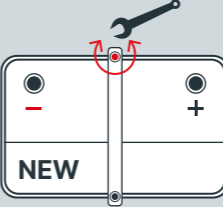

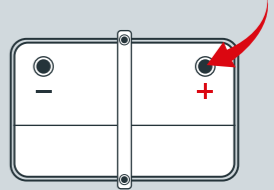

-Batteries increase their usable capacity at higher temperatures
 -The lower the car's engine temperature, the greater the load required to start it.
 ▷ Difficult to start due to bad conditions in both battery and engine starting characteristics at low temperatures

PROCEDURE OF REPLACEMENT

- 

Switch off the engine and Keep sparks, flames, cigarettes away from battery at all times, before removing the old battery.
- 

Disconnect the negative terminal, first and avoid short-circuit caused by tools, when removing old battery.
- 

Clean corroded parts in tray and cable clamps, before installation of new battery.
- 

Connect the positive terminal, first and check the terminal clamps for tight fit, when installing new battery.

PRECAUTIONS

- NO SPARKS, FLAMES, OR SMOKING.
- CHARGE IN WELL VENTILATED AREA. REMOVE FROM VEHICLE PRIOR TO CHARGING.
- READ YOUR VEHICLE, BOOSTER, AND BATTERY MANUALS PRIOR TO CHARGING.
- IN CASE OF EXPOSURE TO ACID, FLUSH IMMEDIATELY WITH WATER. THEN GET IMMEDIATE MEDICAL HELP.
- DO NOT BLOCK OR ALTER VENT HOLE.
- KEEP OUT OF REACH OF CHILDREN.

WARNING!

LEAD ACID BATTERIES GENERATE EXPLOSIVE GASES. KEEP SPARKS, FLAMES, & LIGHTED CIGARETTES AWAY FROM BATTERY, WHEN CHARGING OR USING BATTERY IN AN ENCLOSED SPACE, PROVIDE VENTILATION. THIS BATTERY CONTAINS SULPHURIC ACID. AVOID CONTACT WITH SKIN EYES, OR CLOTHING. IN EVENT OF ACCIDENT FLUSH WITH WATER AND CALL A PHYSICIAN IMMEDIATELY.

					
Flammables	Read Instructions Carefully	Keep out of Reach of children	Caution of Sulfuric Acid	Shield Eyes	Explosive
