

Installation Instruction

1

Connect the pole to the ground and the lamp body, tighten it firmly

2

Choose the best place to absorb the sun and insert it into the soft mud.

3

Toggle the switch to turn on the light, the light automatically lights up in the dark, and turns off automatically at dawn.

The Point to use & install

- ❶ Please confirm the light in good condition before you use, then rock the lamp and check whether it has unfixed fitting because of rush delivery.
- ❷ The light will work in darkness. Please use heavy light-tight thing to cover solar panel completely, keep the switch open. If the lamp work, then do further installment.
- ❸ Install the lamp to meet direct sunshine. The stronger sunshine, the longer time to expose sunshine, the better effect to charge.

The surrounding to forbid installing

- ❶ Glass room (it have bad effect to light strength, not good to charge)
- ❷ Monitor area (the infare of monitor have bad effect to light strength)
- ❸ Under the eaves (donot install the lamp under the eaves or tree, lamp cannot charge under the shade)
- ❹ The place with short sunshine. (keep the lamp to expose sunshine for 6h at least)

Remark

- 1, please place that lamp in sunshine for full charged. If you see the light donot work or work for short time, kindly link factory if it is the same situation as before.
- 2, It is necessary to clean the solar panel if you use for long time already, good for charging.
- 3, it has effect to light strength and working time in some extent in rainy day. Please keep fire away, or else easy to explode because it has battery inside.
